Methods

Table with 3 columns: method, equipment, and values for weights, potency, terpenes, pesticides, mycotoxins, microbial, solvents, and metals.

flower

moisture 7.95%

PASS

stems >3mm dia 0.00%

seeds 0.00%

PASS

bud

Potency

Table listing various cannabinoids and terpenes with their percentages and estimated errors.

Solvents

solvents not tested / not required

Pesticides (MT)

Table listing various pesticides and their concentrations in ppm.

Pesticides (other)

Toxic Metals

metals not tested / not required

Microbial

Table listing microbial counts for E. coli, Salmonella sp., molds, Aflatoxin B1, B2, G1, G2, and Ochratoxin A.

Comments

CBGa = 1.18%

All testing was completed onsite at 6073 US93N, Olney MT. Potency (cannabinoid concentration) is calculated from the equation: [cannabinoid] = [cannabinoid]HPLC x volume_dilution / m_dry. Terpene concentration is calculated from the equation: [terpene] = (terpene mass)GCMS / m_dry. Decarboxyted cannabinoid concentration is calculated from the equation XXX_total = 0.877 x XXXa + XXX. Standards are used to calibrate the resulting data and estimate error using a standard estimate of error method; this is combined with error from weighing and dilution using the propagation of error formula Sg^2 = sum (df/di)^2 * Si^2 where i is the contributor to error. The 95% confidence range is calculated from the equation: (concentration) +/- tCL90 x Sg. Sampling error is not
